Copper Garden Tools

- enrich the soils with copper trace elements
- provide plants with essential nutrients
- hardwearing and will last for years
- free of rust -perfect for the coastal gardener
- sharp edges
- longer lifespan than devices from iron
- beneficial to the soil
- lead to healthier plants
- create conditions for beneficial micro-organisms
- penetrate the soil easily
- low coefficient of friction
- less tendency for clay to cling to the tool
- copper is not magnetic
- does not disrupt the electrical fields in the soil
- can be kept sharp with a whetstone, file or by peening
